- Demonstrated practical understanding through project-based learning modules.

PROJECTS

Room Rent Tracker for Building Owners
Java, Servlets, HTML, JDBC, MySQL
Developed a web-based application to assist landlords in remotely managing and tracking room rent payments from tenants.

- Implemented secure user authentication using HTTP sessions to ensure restricted access.
- Built tenant management features to record and update tenant details including contact information, room number, rent periods, and payment status.
- Designed an automated system to flag overdue payments by checking rent expiration dates and updating statuses accordingly.
- Created a dashboard to display a list of overdue tenants for timely follow-ups.
- Used Servlets and HTML for the front-end interface, ensuring a clean and user-friendly experience.
- Established persistent storage and retrieval using MySQL and JDBC for seamless data management.

Purpose: Replaced manual rent record-keeping with an efficient, digital system—ideal for property owners managing rentals from remote locations. (Github)
